Dear Helen:

Everything seems to be going as well as expected. Your infectious disease course should be a useful complement to your previous work in immunology: this is precisely what I had in mind,

As to the freezer, I think that Dr. Irwin should be able to give instructions for its installation: it is to go to the head of the stairs in whatever arrangement will be most suitable for the ultimate arrangements there.

By all means put out incoming reprints in the drawer. Ignore (and save) requests and acknowledgments. "Studies in Immunity" was returned, to the best of my recollection. You need not concern yourself with the card,

Incoming campus mail should be left with Bette, to be forwarded at her discretion.

The new boy might as well be signed up with Bette (have him fill out 2 withholding forms; I will arrange about funds when I get back).

The new size centrifuge tubes are intentional; I have some more caps on order as well. They should still fit into the large centrifuge, I can't recall about the screw caps; just sit on it.

Sincerely,
